In the Claims:

1. [Original] An image forming system comprising:

a host computer including:

a memory device configured to store original data; and

an interface configured to receive edits of the original data providing edit data; and

an image forming device including:

an input coupled with the host computer and configured to receive the original data and the edit data;

a processor configured to process the original data prior to the image forming device receiving the edit data, and to process the edit data after the processing the original data; and

an image engine configured to form an image corresponding to the processed original data and the processed edit data.

2. [Original] The system according to claim 1 wherein the processor of the image forming device is configured to rasterize the original data and the edit data to provide the processing.

3. [Original] The system according to claim 1 wherein the interface of the host computer and the input of the image forming device are individually configured to receive commands and the image engine is configured to form the image responsive to the commands.

4. [Original] The system according to claim 1 wherein the image engine comprises a print engine configured to form the image upon media.

5. [Original] The system according to claim 1 wherein the host computer includes a processor configured to execute image specification instructions and printer driver instructions.

6. [Original] An image forming method comprising:

providing an image forming device;

first receiving original data within the image forming device;

first processing the original data using the image forming device;

second receiving edit data of the original data within the image forming device;

second processing the edit data using the image forming device; and

forming an image after the processings corresponding to the original data and the edit data.

7. [Original] The method according to claim 6 further comprising receiving an image command after the first receiving.

8. [Original] The method according to claim 6 further comprising receiving an image command after the second receiving.

9. [Original] The method according to claim 6 wherein the first processing and second processing individually comprise rasterizing.

10. [Original] The method according to claim 6 wherein the forming comprises forming the image upon media using a print engine.

11. [Original] The method according to claim 6 further comprising:

providing a host computer; and

executing image specification instructions using the host computer providing the original data and the edit data.

12. [Original] The method according to claim 6 wherein the first processing comprises beginning processing before the second receiving.

13. [Original] The method according to claim 6 wherein the second receiving comprises receiving after the first receiving of the entire original data.

14. [Original] An image forming method comprising:

providing a host computer;

providing an image forming device;

providing original data using the host computer;

first applying the original data to the image forming device;

processing the original data using the image forming device;

editing the original data providing edit data using the host computer;

second applying the edit data to the image forming device;

processing the edit data using the image forming device after the second applying; and

forming an image according to the original data and the edit data after the processings.

15. [Original] The method according to claim 14 further comprising applying an image command to the image forming device using the host computer after the first applying and the forming is responsive to the applying the image command.

16. [Original] The method according to claim 14 further comprising applying an image command to the image forming device using the host computer after the second applying and the forming is responsive to the applying the image command.

17. [Original] The method according to claim 14 wherein the processings individually comprise rasterizing.

18. [Original] The method according to claim 14 wherein the forming comprises forming the image upon media using a print engine.

19. [Original] The method according to claim 14 further comprising executing image specification instructions using the host computer providing the original data and the editing.

20. [Original] The method according to claim 14 wherein the processing the original data comprises beginning processing before the second applying.

21. [New] The system according to claim 1 wherein the interface is configured to receive the edits comprising edits of content of the original data.

22. [New] The system according to claim 1 wherein the interface is configured to receive the edits comprising edits entered by a user.

23. [New] The system according to claim 1 wherein the image engine is configured to form the image using the processed original data and the processed edit data.

24. [New] The system according to claim 1 wherein the interface is configured to receive the edits comprising edits of less than all of the original data.

25. [New] The method according to claim 6 wherein the second receiving comprises receiving the edit data comprising edit data of content of the original data.

26. [New] The method according to claim 14 wherein the editing comprises editing content of the original data.

27. [New] The method according to claim 14 wherein the editing comprises editing responsive to edits indicated by a user.

28. [New] An image forming device comprising:

an interface adapted to couple with a host and to receive original data and edit data from the host, wherein the original data corresponds to content of an image to be formed and the edit data comprises an edit of the content;

processing circuitry configured to access the original data and the edit

data from the interface and to process the original data and the edit data, wherein the processing circuitry is further configured to initiate the processing of at least some of the original data before reception of the edit data within the interface; and

an image engine configured to form the image upon media using combined ones of the processed original data and the processed edit data.

29. [New] The device according to claim 28 wherein the processing circuitry is configured to rasterize the original data and the edit data to process the original data and the edit data.

30. [New] The device according to claim 28 wherein the processing circuitry is configured to initiate the processing of the original data before creation of the edit data using the host.

31. [New] The method according to claim 6 wherein the forming comprises combining the processed original data and the processed edit data.

32. [New] The method according to claim 6 wherein the image forming device is configured to initiate the first processing of the original data before creation of the edit data.

33. [New] The method according to claim 6 further comprising modifying the original data using the edit data after the processing of the original data, wherein the modifying comprises modifying using the image forming device.
